Invisible Braces

– visible success

There are many ways that lead to a flawless smile.
Why not choose the most discreet one?

The Incognito™ braces can correct the position of your teeth with long lasting results. All this takes place without anyone noticing. How does it work? It's very simple. Unlike conventional braces that are fixed to the front side of the teeth, the Incognito braces are discreet as they are fixed to the inner surface of the teeth making them almost invisible from the outside.

This is what makes the Incognito braces ideal for everyone. Whether it be for aesthetic, private or professional reasons - if you would like straight teeth but not the famous “train tracks”, the Incognito braces offer you the discreet solution.

The individual brackets are extremely flat thus ensuring maximum comfort. Since the Incognito braces are fixed to the inner tooth surface, decalcifications to the front of the teeth cannot occur.

Invisible visibly advantageous

- Great patient comfort due to the extremely flat design
- Individually designed and produced just for you
- Virtually invisible from the outside
- Visible success in only a short time
- Reliable correction of all types of incorrect tooth positions
- Suitable for all age groups
- No risk of decalcification on the front tooth surface
